### DETAILED ACTION

1.

#### *Claim Rejections - 35 U.S.C. § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones et al in view of Demmer et al. This rejection has been discussed on paper no. 14, and is maintained.

#### *Response to Arguments*

4. Applicant's arguments filed 3/19/2003 have been fully considered but they are not persuasive. Applicant argues that Jones treatment of the polyamide membrane occurs under controlled conditions of pH, temperature, etc., and that in order to obtain a dissociation forming HOBr or its equivalent a PH of 4 to 6.8 is required, however, a critical pH is not part of the claims limitations. Applicant's also argues that Demmer teaches a method for grafting . Demmer

Art Unit: 1723

is merely cumulative to show equivalence between the halogenated components, e.g. hypochlorite and hypobromide, independently of the process of making or the intended use in the polyamide membrane. Therefore, the rejection is considered proper, however, the following proposed amendment is proposed to get the claims in conditions for allowance.

5. Mr Osha has been contacted to by telephone to proposed and Examiner's amendment, a discussion of the amendment was not possible because he was out of the Office.

6. Proposed amendment:

In claim 1, line 11, after "compound", delete "the bromide being introduced subsequent to forming the polyamide skin layer", this term is redundant.

In claim 1, line 11, after "compound", insert --at a pH in the range from 4 to 6.8; said bromide containing membrane being capable of separating non-ionic compounds--.

After the amendment, the process of making claims will be rejoined, if amended to include the limitation of claim 9, and further to include the non-ionic compound separation properties of the product or membrane.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CAR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 1723

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CAR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
